ABSTRACT

This study aimed to improve the speaking skills of eighth-grade students at MTs Bani Salim through the implementation of the Rotating Story technique. The research was conducted using a Classroom Action Research (CAR) design consisting of two cycles, each involving planning, action, observation, and reElection stages. The participants were eighth-grade students in the 2024/2025 academic year. Data were collected through speaking tests, classroom observations, Eield notes, and documentation. The students' speaking performance was assessed based on four aspects: Eluency, vocabulary, pronunciation, and grammar. The results showed a signiEificant improvement in students' speaking ability after the implementation of the Rotating Story technique. The overall average score increased from 2.45 in Cycle 1 to 3.57 in Cycle 2. Improvements were observed across all speaking aspects, with pronunciation and vocabulary showing the most notable gains. In addition to quantitative improvement, qualitative Eindings indicated that students became more active, conEident, and engaged in speaking activities. They were able to produce more spontaneous speech, develop ideas more coherently, and interact more effectively with their peers. The Eindings suggest that the Rotating Story technique provides meaningful opportunities for students to practice speaking in a collaborative and low-anxiety environment. This technique encourages active participation, supports vocabulary development, and enhances students' conEidence in oral communication. Therefore, it can be considered an effective and practical alternative strategy for teaching speaking in EFL classrooms, particularly at the junior high school level.

MOTTO

لَا يَكْلِفُ اللَّهُ نَفْسًا إِلَّا وُسْعَهَا

Allah does not burden a person beyond their capacity.

DEDICATION

This graduation paper is dedicated to:

1. First of all, thanks to Allah SWT, who has guided me well in facing everything in this world.
2. Secondly, the prophet Muhammad SAW. Thank you for your glorious history, making it an example for us as Muslims. The goodness that you spread throughout the world will always be followed as a lesson of life.
3. Third, for my beloved parents, Mr. Sukoyo and Mrs. Susmiriyati who have prayed for the success of your child. Thank you for the motivation that you always give.
4. For my dear brothers, Ezzar Vallentino Al Khatari thank you for being the reason for making me a good sister.
5. To all my best friends. Thank you for your support and the joy we have shared.
6. My beloved almamater, Raden Intan Lampung State Islamic University, which has made me more mature and has contributed a lot to my self-development.

CURRICULUM VITAE

The author, Yorika Nurul Khasanah, is the first of two children born to Sukoyo and Susmoriyati. She has an older brother named Ezzar Vallentino Al Khatari. The author was born in Remanem Jaya, Perkuranan Selatan, South Ogan Komering Ulu Regency, on August 28, 2003.

The author began her education at Remanem Jaya Elementary School 01 in 2009 and graduated in 2015. She then continued her education at MTS Al-Ittifaqiah Indralaya for junior high school, graduated in 2018. She then continued her education at Madrasah Aliyah Al-Ittifaqiah Indralaya for upper secondary education, graduated in 2021. In the same year, 2021, she was accepted as a student at the Faculty of Tarbiyah and Teacher Training at the State Islamic University (UIN) Raden Intan Lampung through the UM-PTKIN pathway in the English education study program.

ACKNOWLEDGEMENT

Alhamdulillahirabbil'alamin, praise and gratitude to Allah SWT, who has given all the enjoyment, knowledge, convenience and guidance so that the author can complete this thesis as one of the requirements in fulfilling the Bachelor of Education degree. The completion of this thesis goes through a long process where the researcher realizes that the thesis written is far from perfect, so constructive criticism and suggestions are needed for the future. In addition, the completion of this thesis is inseparable from the assistance, guidance, and direction of the parties involved and participated in providing moral and material support. Therefore, with all due respect, the researcher would like to thank:

1. M. Ridho Kholid, S.S., M.Pd as the Head of Language Education Study Program of Faculty of Tarbiyah and Teaching Training Raden Intan State Islamic University of Lampung who has provided direction, guidance and provided information about lectures.
2. M. Ridho khalid S.S, M.Pd as the academic advisor who has taken the time to assist researchers, provide direction, enthusiasm, and correct deficiencies in the preparation of this thesis with great patience and dedication to researchers.
3. Yulan Puspita Rini S.S, MA as the second supervisor, who has spent countless hours correcting my bachelor thesis.
4. Mr. and Mrs. lecturers of the Faculty of Tarbiyah and Keguruan UIN Raden Intan Lampung who have educated and provided knowledge to researchers during lectures.
5. Faculty of Tarbiyah and Keguruan UIN Raden Intan Lampung who have helped researchers to facilitate the administrative process.
6. For Myself, thank you for being strong to fight this far, thank you for trying hard to get to this point.
7. For My Best Friends, Ismarianti S.Pd, Ghefira. S.Pd, Yesi Destalinda, thank you for your ove, support, and helping me.
8. Class of 2021 Friends, especially PBI class C, who have been together since the beginning of the lecture until now.

9. All parties who cannot be named one by one who have contributed to helping both morally and materially in completing the thesis.

The researcher hopes to Allah SWT that what they have given with all their ease and sincerity will be a reward and a blessed charity and get ease from Allah SWT, Aamiin.

A. INTRODUCTION

Speaking is a central productive skill in learning English because it enables learners to express ideas, negotiate meaning, and participate in real communication. In EFL settings, however, speaking is often one of the most demanding skills because learners must produce language spontaneously while managing vocabulary, grammar, pronunciation, and fluency at the same time (Hwang et al., 2024). Recent research shows that speaking performance is closely connected to learners' affective conditions, especially confidence, enjoyment, and anxiety, which may either support or hinder oral production (Özdemir & Seçkin, 2025; Sun et al., 2025). Foreign language anxiety, in particular, remains a major barrier because it can reduce learners' willingness to speak, limit participation, and weaken performance in productive tasks (Bashori et al., 2021).

Preliminary observations at MTs Bani Salim showed that students' participation in speaking activities was still low. The classroom atmosphere was dominated by the teacher, so students tended to take passive roles during learning. As a result, students had limited opportunities to practice oral English in meaningful interaction. This condition is important because speaking development requires repeated participation, not only passive exposure to language input. In the context of this study, the preliminary findings also indicated that students were hesitant, nervous, and not yet confident when asked to speak in English.

Further interviews with the English teacher revealed that the students' speaking difficulties were mainly caused by limited vocabulary mastery, fear of making mistakes, and lack of spontaneous speaking experience. These findings are consistent with current research showing that speaking anxiety is influenced by learners' limited linguistic resources and their fear of negative evaluation (Sun et al., 2025). Studies on foreign language anxiety also show that anxiety is dynamic and can fluctuate depending on classroom interaction, task design, and teacher support. Therefore, speaking instruction should not only develop linguistic competence,

but also create a safe and supportive learning environment that reduces pressure and encourages students to participate actively (Özdemir & Seçkin, 2025).

One promising way to support speaking development is through Communicative Language Teaching (CLT), which emphasizes meaningful interaction, learner-centered activity, and opportunities for authentic communication. Research in EFL contexts shows that CLT can improve students' communicative competence and confidence because learners are given more chances to use English actively in classroom interaction (Cloudia Ho, 2020). This is especially relevant for junior high school learners who need structured but engaging speaking opportunities. In addition, recent studies on speaking development indicate that interactive tasks can strengthen not only overall speaking performance, but also specific subskills such as fluency, lexicon, grammatical accuracy, and pronunciation (Hwang et al., 2024). Therefore, speaking instruction should be designed to maximize interaction and reduce the dominance of teacher-centered explanation.

Within this pedagogical orientation, the Rotating Story technique is a relevant alternative because it transforms speaking practice into a collaborative storytelling task. In this activity, students continue a story in turns, respond to their peers' contributions, and build ideas sequentially (Yao et al., 2025). This kind of oral narrative activity is supported by evidence that storytelling can improve vocabulary use, communicative ability, and oral language development. A systematic review and meta-analysis found that narrative interventions, including traditional storytelling and digital storytelling, significantly improve second language learning outcomes, and that both formats can be equally effective (Wu & Chen, 2020). Earlier experimental work also showed that storytelling helps learners develop vocabulary and use words and phrases more appropriately in communication (Mokhtar et al., 2011). These findings suggest that storytelling-based tasks can provide meaningful speaking practice while keeping learners engaged.

Rotating Story also aligns with classroom conditions where students need more structured interaction. Because each student must contribute to the continuation of the story, the technique encourages active listening, spontaneous speech, and peer dependence in a positive way. It may also help reduce anxiety because learners speak in a shared task rather than in isolation. Recent research on speaking-related anxiety suggests that supportive classroom practices such as pair work, group work, positive feedback, and repeated practice can help learners manage anxiety and improve performance (Özdemir & Seçkin, 2025). Likewise, a recent study on technology-supported speaking tasks found that interactive practice can improve speaking skills while also enhancing affective variables such as enjoyment and grit (Bashori et al., 2021; Hwang et al., 2024). For this reason, Rotating Story is expected to be suitable for students who need a low-pressure but communicative environment to practice English orally.

Although storytelling has been widely discussed in language teaching research, studies that specifically examine the application of Rotating Story in Islamic junior high school contexts remain limited, especially at MTs Bani Salim. This gap is important because each school context has its own classroom dynamics, learner characteristics, and instructional challenges. Therefore, this study aims to investigate the implementation of the Rotating Story technique to improve the speaking skills of eighth-grade students at MTs Bani Salim through Classroom Action Research. The study focuses on fluency, vocabulary, pronunciation, and grammar, while also observing changes in students' participation and confidence during speaking activities. The findings are expected to contribute to the development of more interactive, student-centered, and communicative approaches to speaking instruction in EFL classrooms.

B. METHOD

This study employed Classroom Action Research (CAR) because the design is suitable for improving classroom practice

through repeated cycles of planning, action, observation, and reflection. Recent EFL studies show that action research is commonly used when teachers aim to solve local classroom problems and refine instruction step by step, including in speaking lessons (Aljohani, 2022; Manurung, 2015; Zhang & Wang, 2024). The present research was conducted in two cycles. In each cycle, the researcher prepared the lesson plan and learning materials, implemented the Rotating Story technique, observed students' participation and speaking performance, and then reflected on the results to determine the revisions needed for the next cycle.

The participants were eighth-grade students of MTs Bani Salim in the 2024/2025 academic year. Data were collected through classroom observation, speaking tests, field notes, and documentation. Observation and field notes were used to capture students' engagement, interaction, and difficulties during the learning process, while the speaking tests administered at the end of each cycle were used to measure progress in oral performance. The speaking assessment focused on four criteria: fluency, vocabulary, pronunciation, and grammar (Brown, 2004). This choice is consistent with recent speaking research showing that oral proficiency is commonly evaluated through fluency, lexical resource, grammatical range and accuracy, and pronunciation, and that vocabulary knowledge is an important predictor of speaking performance and fluency (Aljohani, 2022; Istiara et al., 2023; Manurung, 2015; Zhang & Wang, 2024).

Each speaking component was scored on a 1–5 scale. Fluency was judged by the smoothness of speech and the degree of hesitation or pausing; vocabulary was assessed by the range, accuracy, and appropriateness of word use; pronunciation was evaluated by clarity and intelligibility; and grammar was measured by the accuracy and appropriateness of sentence structure. The final speaking score was obtained by averaging the four component scores, and the result was then converted into a percentage of achievement.

The data were analyzed using both qualitative and quantitative approaches. Quantitative data from the speaking tests were processed by calculating the mean score of each cycle and the

percentage of improvement from Cycle 1 to Cycle 2, while qualitative data from observation sheets and field notes were analyzed descriptively to identify patterns in student participation, classroom interaction, learning difficulties, and the overall implementation of the Rotating Story technique.

C. RESULTS AND DISCUSSION

Results

The students' speaking performance was measured in two cycles using four indicators: fluency, vocabulary, pronunciation, and grammar. Each indicator was scored on a scale of 1 to 5. The results show a consistent improvement from Cycle 1 to Cycle 2 after the implementation of the Rotating Story technique.

In Cycle 1, the students' speaking performance was still in the low category. The average scores indicate that pronunciation obtained the lowest score, while grammar achieved the highest score among the four aspects. Overall, the students were able to produce simple sentences, but their speaking was still characterized by hesitation, limited vocabulary, and weak pronunciation accuracy.

Table 1 The Average Scores of Each Speaking Aspect Test in Cycle 1

No	Assessment Aspect	Average Score	Level of Achievement	Category
1.	Fluency	2.65	53	Poor
2.	Vocabulary	2.30	46	Poor
3.	Pronunciation	2.10	42	Poor
4.	Grammar	2.75	55	Fair
	Overall Average	2.45	49	Poor

The results in Table 2 show that students had not yet performed well in spontaneous speaking. Although grammar was relatively better than the other aspects, the overall speaking achievement in Cycle 1 remained low. After revisions were made in Cycle 2 by providing clearer examples, additional vocabulary support, and more intensive practice through the Rotating Story

technique, the students showed better performance in all speaking aspects. The scores improved across fluency, vocabulary, pronunciation, and grammar, indicating that the students became more confident and more capable of continuing the story with greater ease.

Table 2 The Average Scores of Each Speaking Aspect Test in Cycle 2

No	Assessment Aspect	Average Score	Level of Achievement	Category
1.	Fluency	3.70	74	Good
2.	Vocabulary	3.47	70	Good
3.	Pronunciation	3.45	69	Fair – Good
4.	Grammar	3.65	73	Good
	Overall Average	3.57	70	Good

Table 3 shows that all speaking indicators improved in Cycle 2. Fluency and grammar recorded the highest gains, while pronunciation also increased to a better level. The overall average score rose from 2.45 in Cycle 1 to 3.57 in Cycle 2, showing a clear improvement in students' speaking performance after the implementation of the Rotating Story technique.

Table 3 Comparison of the Average Scores of Each Speaking Aspect in Cycle 1 and Cycle 2

No	Assessment Aspect	Cycle 1	Cycle 2	Improvement
1.	Fluency	2.65	3.70	+1.05
2.	Vocabulary	2.30	3.47	+1.17
3.	Pronunciation	2.10	3.45	+1.35
4.	Grammar	2.75	3.65	+0.90
	Overall Average	2.45	3.57	+1.12

The comparison in Table 3 confirms that the students experienced improvement in all assessed aspects. The largest gain was found in pronunciation, followed by vocabulary, fluency, and grammar. Overall, the findings indicate that the Rotating Story technique contributed positively to the development of students'

speaking ability across the two cycles.

Discussion

The improvement in students' speaking performance from Cycle 1 to Cycle 2 indicates that the Rotating Story technique was effective in promoting oral production in a classroom setting. In this study, the overall mean score increased from 2.45 to 3.57, with the largest gain found in pronunciation, followed by vocabulary, fluency, and grammar. This pattern is consistent with research on oral narrative interventions, which shows that telling and retelling stories can significantly improve language outcomes across contexts. A recent systematic review and meta-analysis found that oral narrative interventions, including traditional storytelling, are beneficial for second-language learning, with the strongest effects often appearing when learners repeatedly engage in meaningful narrative tasks rather than isolated drills (Yao et al., 2025). From this perspective, Rotating Story appears to work because it gives students repeated chances to speak for a communicative purpose while staying anchored in a shared narrative structure (Kim & Tracy-Ventura, 2013).

The gains in fluency and vocabulary are especially important. Vocabulary knowledge is not only a supporting skill but also a direct predictor of speaking ability. Enayat and Derakhshan found that vocabulary size and productive vocabulary knowledge significantly contribute to overall speaking proficiency, as well as to fluency and lexical resource (Janebi Enayat & Derakhshan, 2021). This helps explain why the students in Cycle 2 performed better after receiving vocabulary support before the storytelling activity. When learners have access to more lexical items, they can retrieve words faster, reduce pauses, and sustain longer stretches of speech (Bashori et al., 2021). The present findings therefore suggest that the Rotating Story technique does not improve speaking through practice alone; it also creates repeated lexical retrieval opportunities in a meaningful context, which is likely to strengthen students' word use and verbal flow. That interpretation is also supported by the fact that vocabulary deficits are widely associated with weaker language performance and higher speaking anxiety. The

improvement in pronunciation and grammar may be understood as a gradual effect of repeated oral production and peer-supported interaction. In Cycle 1, students were hesitant and needed more time to continue the story, whereas in Cycle 2 they spoke more confidently and with fewer interruptions. Task-repetition research shows that repeating oral tasks can improve overall L2 performance, with particular benefits for fluency and structural development. Kim and Tracy-Ventura reported that repeated or procedurally repeated collaborative tasks support development in complexity, accuracy, and fluency, even when speech rate does not rise dramatically (Kim & Tracy-Ventura, 2013). Likewise, a later study on repeated oral narratives found that task repetition can assist learners in improving lexical diversity and other CAF dimensions across performances (Muhammadpour et al., 2023). In the current study, the better pronunciation and grammar scores in Cycle 2 may therefore be interpreted as an early form of accuracy development produced by repeated rehearsal, greater familiarity with the task format, and increased attention to form during peer interaction.

Another key explanation lies in the affective dimension of speaking. Speaking success depends not only on linguistic knowledge but also on willingness to communicate, confidence, and anxiety levels. Lee and Hsieh show that self-confidence and low anxiety are strongly associated with willingness to communicate in in-class and out-of-class settings (Lee & Chen Hsieh, 2019). Bashori et al. similarly found that vocabulary-focused intervention could reduce speaking anxiety and increase language enjoyment among Indonesian secondary school learners (Bashori et al., 2021). These findings are relevant to the present study because the Rotating Story technique creates a collaborative, low-pressure speaking environment in which students contribute short segments rather than performing individually in isolation. Such a format likely lowers affective barriers, increases turn-taking confidence, and helps students participate more actively (Bashori et al., 2021; Lee & Chen Hsieh, 2019). Overall, the results suggest that Rotating Story is pedagogically useful because it combines narrative repetition, peer interaction, and reduced anxiety, all of which support speaking development in junior

D. CONCLUSIONS

Based on the findings of this study, it can be concluded that the implementation of the Rotating Story technique was effective in improving the speaking skills of eighth-grade students at MTs Bani Salim. The improvement was evident from the increase in students' overall speaking scores from Cycle 1 to Cycle 2, as well as from the development of all assessed aspects, including fluency, vocabulary, pronunciation, and grammar. Among these aspects, pronunciation and vocabulary showed the most noticeable progress, indicating that students became more accustomed to producing spoken language and using more appropriate lexical items in context. In addition, qualitative observations revealed that students became more active, confident, and engaged during speaking activities, suggesting that the technique successfully created a more interactive and supportive learning environment.

Furthermore, the findings highlight that the Rotating Story technique not only improves linguistic performance but also enhances students' participation and reduces hesitation in speaking. The collaborative nature of the activity allows students to share ideas, respond to peers, and practice speaking in a less stressful context, which contributes to increased confidence and willingness to communicate. Therefore, this technique can be considered an effective alternative strategy for teaching speaking in EFL classrooms, particularly at the junior high school level. Future research is recommended to explore the application of this technique in different educational contexts, with larger samples or longer implementation periods, to further examine its effectiveness and potential integration with other communicative teaching approaches.

INTRUMENT PENELITIAN

IMPROVING SPEAKING SKILLS BY USING ROTATING STORY AT EIGHT GRADE STUDENTS OF MTS BANI SALIM

A. Observations

were techniques for collecting data about researchers' and students' activities in the teaching and learning process. Then observation sheets were given based on reality in the classroom. The type of observation used in this research was direct observation. Field notes were notes made by researchers whether they were heard, seen, or observed when making observations.

1. CLASSROOM OBSERVATION SHEET

Technique: Rotating Story

Class: VIII A

School: MTs Bani Salim

Observer:

Cycle: I / II

Date:

Time:

A. Pre-activity

NO	Aspect Observed	Indicators	Notes
1.	Teacher's Preparation	The teacher explains the lesson objectives and gives clear instructions about the Rotating Story activity.	
2.	Students' Readiness	Students listen attentively and show readiness to participate in the activity.	
3.	Motivation and Engagement	The teacher motivates and encourages students; students appear enthusiastic and interested.	
4.	Vocabulary Preparation	The teacher provides key vocabulary or useful expressions for the speaking activity.	
5.	Classroom Management	The teacher organizes the groups, seating, and materials effectively.

B. While Activity

NO	Aspect Observed	Indicators	Notes
1.	Students' Participation	All group members actively take turns continuing the story according to the given rules.	
2.	Interaction and Collaboration	Students cooperate well, listen to others, and continue the story logically.	
3.	Use of English	Students use English throughout the activity and minimize the use of Indonesian.	
4.	Fluency and Confidence	Students speak fluently and confidently without fear of making mistakes.	
5.	Story Coherence The story develops logically, creatively, and fits the given context.	The story develops logically, creatively, and fits the given context	

C. Post-Activity

NO	Aspect Observed	Indicators	Notes
1.	Teacher's Feedback	The teacher gives constructive feedback on students' speaking (pronunciation, grammar, fluency).	
2.	Peer Feedback	Students give positive and relevant comments to their classmates.	
3.	Students' Reflection	Students share their opinions about the learning experience and express their feelings about the activity.	
4.	Closing	The teacher concludes the lesson by summarizing key points and motivating students for the next activity.

Appendix 9 Speaking Test

Speaking Test

Class: VIII A

School: MTs Bani Salim

Topic: Rotating Story

Cycle: I / II

Time Allocation: 2-4 minutes per group

A. Instructions

1. The teacher will divide the class into small groups of 5 students
2. Each group will receive a story starter (an opening sentence or a picture) from the teacher.
3. Students take turns continuing the story orally in English.
4. Each student must say 2–4 sentences when it is their turn.
5. The story must be logical, creative, and connected to the previous part.
6. The teacher and collaborator will observe your fluency, pronunciation, grammar, vocabulary, and comprehension during the activity.

B. DOs (What You Should Do)

1. Speak only in English during the activity.
2. Listen carefully to your friends before continuing the story.
3. Use clear pronunciation and speak loud enough to be heard.
4. Be creative and continue the story naturally.
5. Encourage your friends and show respect when they are speaking.
6. Try to use new vocabulary that you have learned.
7. Keep your story connected and meaningful to the topic.
8. Smile and speak confidently!

C. DON'Ts (What You Should Not Do)

1. Don't use Indonesian or other languages during your turn.

2. Don't interrupt or laugh at your friends while they are speaking.
3. Don't read from a paper — speak spontaneously.
4. Don't repeat the same ideas that have already been mentioned.
5. Don't stay silent when it's your turn — say something, even simple sentences.
6. Don't criticize others' mistakes negatively.

D. Test

a. Cycle I

Topic: Describing Food and Things Around Us

Stimulus 1: Describing food

Prompt: Describe the favorite food

what taste of the food, when usually eat? How the taste?

Example opening: "I like pizza, pizza is delicious."

Stimulus 2: Describing a Thing

Picture: A student's school bag with books and stationery inside.

Prompt: Describe your school bag.

What does it look like? What things are inside it?

Example opening: "This is my school bag. It is blue and black. Inside my bag, there are some books, a pencil case, and a bottle."

Purpose of Cycle I: To identify students' initial speaking ability and difficulties in describing familiar objects and people before refining the strategy in Cycle II.

b. Cycle II

Topic: Describing person and Places

Stimulus 1: Describing person

Prompt: Describe mother.

What is their name? How they look like?

Example opening: "I have a beautiful mother."

Stimulus 2: Describing a Place

Picture: A school library with books and students reading.

Prompt: What place is it? What can you see there?

What do people usually do in this place?

Example opening: "This is the school library. It is clean and quiet. There are many books and some students reading. I like to study here."

Purpose of Cycle II: To assess students' improvement in fluency, vocabulary, pronunciation, and confidence after the second implementation of Rotating Story.

3. Student Assignment

Continue the story based on the sentences or pictures provided. The story must have a beginning, events, and an end. Use English as much as possible.

4. Assessment Rubric

Aspect	Indicator	assessment description	rating scale (1-5)
Fluency	Speaks fluently without many pauses or hesitations	Speech flows, minimal pauses, no stuttering	1 = Very slow and halting, 5 = Very fluent
Vocabulary	Using appropriate and varied vocabulary according to context.	Word choice is clear, precise and supports the message.	1 = Very limited vocabulary, 5 = Extensive and precise vocabulary.
Pronunciation	Pronounce words clearly and correctly so that they are easy to understand	Pronounce words correctly so that they are easy for the listener to understand.	1 = Difficult to understand, 5 = Very clear and correct.
Grammar	Using the correct sentence structure according to language rules.	Sentences spoken are grammatically correct and easy to	understand. 1 = Many errors, 5 = Very correct and appropriate.

Explanation :

Very good (score 5)

Good (score 4)

Adequate (Score 3)

Less (score 2)

Very poor (score 1)

Value = total student scores : maximum number of scores x 100

Final score= tester value 1 + taster

value 2 : 2

Percentage of achievement score
